STARCHASE LAUNCHES GEN III GPS PURSUIT MANAGEMENT SYSTEM

Virginia Beach, VA – October 11, 2016 – StarChase LLC, a provider of GPS tracking and pursuit management technology, announced the release of its GEN III GPS launcher solution. The solution has become an invaluable resource for law enforcement agencies to address vehicle-related, high-risk events and to mitigate dangers that law enforcement, and the community, face daily throughout the country. The enhancements focus on bolstering performance, increasing durability and improving overall success.

“StarChase has been proving its value as an alternative to police pursuits by enabling the enforcement of the law while reducing the risk to the public and officers posed by high-speed chases,” said Trevor Fischbach, president of StarChase. “StarChase is now in its third generation rollout, which features important refinements that improve system performance and give even more advantages to law enforcement as they address high-risk vehicle situations.”

GEN III updates include enhanced elevation controls for faster target acquisition; all-season weather covers to minimize exposure to the elements; and modified launcher barrels for improved loading and enhanced flight. The GEN III system also features hardened mounting kits for increased durability and install options. Finally, new features to GEN III also include new audible alerts and lock-out controls for enhanced operation.

“The GEN III update improves real-time critical intelligence and allows law enforcement to manage events and resources tactically while elevating situational awareness,” added Fischbach. “GEN III builds upon our proven ability to reduce adrenaline during high-risk events by enabling a coordinated tactical response without the costly outcomes that can take place with high speeds and reckless suspects.”

Working with law enforcement agencies of all sizes throughout the U.S. and Canada, StarChase has proven to be effective in numerous high-risk vehicle scenarios, such as auto theft, DUI enforcement, narcotics and human trafficking, as well as task force operations. StarChase’s Pursuit Management Technology provides law enforcement an alternative to traditional pursuit outcomes, and aligns well with today’s strict no pursuit policy, by enabling law enforcement the ability to tag, track and locate a fleeing suspect. The GEN III update is the latest development in StarChase’s effort to provide force multiplying solutions that empower law enforcement, mitigate risk and protect communities.
